## Возможности и преимущества

- Библиотека позволяет с легкостью находить работы по смежным темам;
- Интуитивно понятный интерфейс и удобные функции навигации;
- Специальные иконки явно указывают на тип доступа к тому или иному материалу, что облегчает работу и навигацию;
- Расширенные возможности для быстрого и удобного поиска нужного материала;
- Ключевые слова позволяют углублять поиск материалов с помощью связанных слов и терминов.

Главная страница

The screenshot displays the Wiley Online Library interface. At the top left, the logo and name 'Wiley Online Library' are visible, along with the text 'Access by Higher School of Economics Library'. A search bar with a magnifying glass icon and a 'Login / Register' button are located in the top right. The main content area shows search results for '1 & 2 Thessalonians: Through the Centuries' and '1, 2 Peter and Jude Through the Centuries'. A left sidebar contains filters for 'Alphanumeric' (A-Z) and 'Publication Type' (Books, Journals, Reference works, Book Series). A red dashed box highlights a 'Login / Register' button in the top right and a promotional banner below it. The banner features the text 'Accelerating research discovery to shape a better future' and 'Today's research, tomorrow's innovation', a search bar, and a button 'Access COVID-19 research here'. Below the banner, statistics for '1,600+ Journals', '250+ Reference Works', and '22,000+ Online Books' are shown. A 'Resources' section at the bottom lists links for Researchers, Librarians, Societies, and Authors.

**ABSTRACT**  
**Aim:** Due to age-dependent manifestations, diagnosis of Marfan syndrome (MFS) in children and adolescents is sophisticated. Although revised Ghent criteria is a major step forward, its utility in children is still restricted due to expensive and technically advanced diagnostics. As early diagnosis submits long-term benefits concerning prognosis, the need of an appropriate diagnostic tool for risk stratification of suspected paediatric patients with Marfan is justified.  
**Methods and results:** Sixty paediatric patients with Marfan were subject to a standardized diagnostic programme. All clinical symptoms of the revised Ghent nosology were analysed concerning age at first clinical manifestation, prevalence and likelihood ratio for MFS.

pendent manifestations, diagnosis of Marfan syndrome (MFS) in children is sophisticated. Although revised Ghent criteria is a major step forward, diagnosis in children is still restricted due to expensive and technically advanced diagnostics. As early diagnosis submits long-term benefits concerning prognosis, the need of an appropriate diagnostic tool for risk stratification of suspected paediatric patients with Marfan is justified.

**Findings and results**  
Sixty paediatric patients with Marfan were subject to a standardized diagnostic programme. All clinical symptoms of the revised Ghent nosology were analysed concerning age at first clinical manifestation, prevalence and likelihood ratio for MFS. In early onset, high prevalence and high positive likelihood ratio were combined for a risk score called Kid-Short Marfan Score (Kid-SMS). Three criteria for suspicion of Marfan syndrome were developed. Finally, the Kid-SMS identified more suspected patients with Marfan compared with Ghent nosology, and genetics alone without oversensitivity.

The screenshot displays the Wiley Online Library interface for an article. On the left, a sidebar contains navigation options: INFO, OUTLINE, MATERIALS, and LINKS. Below these are tabs for REFERENCES, CITED BY, and RECOMMENDED. The REFERENCES section is active, showing a list of cited works with options for CROSSREF, WEB OF SCIENCE, GOOGLE SCHOLAR, and HSE FULL TEXT. A 'View PDF' button is visible at the bottom of the sidebar. The main content area shows 'Page 2 / 18' and a table titled 'TABLE 1 A cursory review of the literature on efficient market efficiency of cryptocurrency'. The table has five columns: Authors, Objectives, Methodology, Data structure, and Findings. It lists various studies on cryptocurrency market efficiency, including works by Bariviera (2017), Cheah et al. (2018), Asanidze (2018), Caporale & Plastun (2018), and others. A red dashed box highlights the top right corner of the page, containing navigation icons for zooming, printing, and downloading. A red arrow points from the text 'Нажмите на кнопку Download document...' to the download icon in this box.

Authors	Objectives	Methodology	Data structure	Findings
Bariviera, 2017; Nadarajah & Chu, 2017; Ureghart, 2016	Market efficiency of Bitcoin	Runs test, Ljung-Box, automatic variance ratio test, Bartels test, BDS and R/S	Daily closing prices for Bitcoin in USD from 1 August 2010 to 31 July 2016	Informational inefficiency in the Bitcoin return series, which was dependent on the sample period considered. The informational efficiency was observed in periods covering recent years
Cheah, Mishra, Parhi, & Zhang, 2018	Cross-market Bitcoin prices as long memory processes and study dynamic interdependence	FCVAR model	Daily closing prices for Bitcoin in USD from 27 November 2013 to 17 March 2017, for five developed countries—Europe, United States, Australia, Canada and United Kingdom	Fractional co-integration in cross-country Bitcoin prices, while disequilibrium errors were found to adjust slowly over the long run. Heterogeneous degree of inefficiency was observed in the Bitcoin markets
Bariviera, 2017; Tiwari, Jana, Das, & Roubaud, 2018; Zhang, Wang, Li, & Shen, 2018	Market efficiency via time-varying behaviour of long memory of returns on Bitcoin and volatility	DFA and MF-DCCA	2011–2017	The R/S method detected long memory behaviour in the cryptocurrency, whereas DFA method discriminated informational efficiency across time. There was persistence of daily returns in the first half of the sample, whereas its behaviour was more informational efficient since 2014
Asanidze, 2018	Efficiency of Bitcoin market according to adaptive market hypothesis, to check for linear independency in returns	Three different variance ratio tests, Kim's wild bootstrapping based on Lo and MacKinlay (1988), Wright's (2000) Signs and	Daily data in the period from September 2010 to May 2017	A changing level of returns, finding both statistically significant and non-significant values. His results were in accordance with the adaptive market hypothesis, confirming evolving
Caporale & Plastun, 2018	Price over reactions in Bitcoin, Litecoin, ripple and dash by means of some parametric and non-parametric tests	The F test, ANOVA and regression analysis with dummy variables, while the non-parametric test was the Mann-Whitney U test		Both categories of tests confirmed the presence of price patterns in cryptocurrency, implying dependence of prices in these markets. These market reactions detected in the cryptocurrency market further indicated evidence that abnormal profits by traders was impossible and this supported the EMH
Rakiclar, Bouri, Gupta, & Roubaud, 2017; Bouri et al., 2018; Yaya, Oghonna, & Olubusoye, 2019	Market efficiency and long-range dependence in returns	Unit roots, autocorrelation, nonlinearity and long-range dependence	Different time samples	Evidence of long-range dependence and nonlinearity in some cryptocurrencies

### Abstract

This article investigates both market efficiency and volatility persistence in 12 cryptocurrencies during pre-crash and post-crash periods. The article contributes to the debate on the market efficiency of cryptocurrencies in the presence of volatility, considering robust fractional integration methods in both linear and nonlinear setups. We find that markets of Bitcoin and most altcoins considered in our study can be dubbed as efficient, and are also highly volatile, particularly, in the post-crash period that we are experiencing now. The volatilities are more likely to persist for a shorter period than volatilities in the pre-crash period. Our work, therefore, renders important information to cryptocurrency market participants and portfolio managers.

### 1 INTRODUCTION

As a result of the 2007/2008 crash in the global financial market, individuals and traders have lost interest in investing in economic policy driven investments, such as stocks, foreign exchange rates, oil and gold. Pricing of these assets is driven by global markets, which are influenced considerably by United States economic and political activities, and are thus traditional market systems. As a result, the global market is moving to a non-traditional monetary system, independent of government policy and politics. Cryptocurrency, the digital currency, has become another investment source, accepted in the global market (Weber,
