Abstract

Product and service innovation does not happen in isolation; it requires a cross-functional team—most of whom are not designers and may not even be familiar with design practices. In digital product or service offering, more often than not the core team developing/enhancing product consists of multiple functions—from design and engineering to marketing and sales, with little or no familiarity with design processes and practices such as creative ideation. In such cases, ideation becomes a platform for groupthink and corporate inertia, deterring lateral thinking and innovation.

Hence, a structured approach to idea facilitation can help achieve the maximum opportunities availed by ideation sessions: innovative experience and service ideas. Structured ideation frameworks can discourage linear thinking and encourage teams to think strategically and laterally—by switching perspectives, identifying multiple points of view, challenging assumptions, and contextualizing problems.

by Hina Shahid

Product and service innovation does not happen in isolation; it requires a cross-functional team—most of whom are not designers and may not even be familiar with design practices. In digital product or service offering, more often than not the core team developing/enhancing product consists of multiple functions—from design and engineering to marketing and sales, with little or no familiarity with design processes and practices such as creative ideation. In such cases, ideation becomes a platform for groupthink and corporate inertia, deterring lateral thinking and innovation. Hence, a structured approach to idea facilitation can help achieve the maximum opportunities availed by ideation sessions: innovative experience and service ideas. Structured ideation frameworks can discourage linear thinking and encourage teams to think strategically and laterally—by switching perspectives, identifying multiple points of view, challenging assumptions, and contextualizing problems. This paper provides a number of idea facilitation frameworks that enable creative and innovative outcomes when working with a multifunctional team—with design and non-design professionals with various levels of product-service development experience. These frameworks bridge the gap between insights and strategy and create conditions necessary for creative and lateral thinking. Additionally, it provides best practices to help operationalize idea management.

Key words: design management, idea generation, idea facilitation, product development, service and experience innovation

Introduction

Ideas not only help us understand the world; they fuel new directions. Ideas are in fact one of the most powerful forces shaping the human culture, powering industries and businesses and bringing about product-service innovation. Thus, ideation—the creative process of generating original ideas—is essential to innovation. Ideation is a means of both solving problems and

The Extended Value of Design: An Advanced Design Perspective

Flaviano Celaschi,
Professor of
Industrial Design,
Politecnico di Milano

Manuela Celi,
Researcher,
Milan Polytechnic

Laura Mata García,
PhD Candidate,
Milan Polytechnic

by Flaviano Celaschi, Manuela Celi, and Laura Mata García

Design is increasingly recognized as a key strategic asset and a source of added value for companies. The United States has launched a national design policy initiative to monitor and understand the role of design in the national and global economy, and the European Union (EU) is overseeing a series of public consultations on how the EU can further support design-led innovation, with the aim of integrating design into innovation policies. In the United Kingdom, the Design Council has performed a series of studies on design's role as a strategic instrument to maximize performance and trigger innovative processes, even during periods of crisis.

Clearly, the value that design generates is not confined to the end result of the design process. The need to focus on continuous innovation and advancing tomorrow's products and services often finds the right answers through the production of intermediate components of the design process.

Advanced design is a practice that imagines future perspectives by envisioning future products and processes. It mainly deals with extensive projects—extended in time, space, uncertainty, and complexity. As a branch of design, it covers primarily the front end of innovation and looks for solutions in complex innovation processes using design-related tools and practices (Celi, 2010, p. 33).

This article will discuss the different ways in which advanced design supports the development of instruments and practices aimed at supporting and managing value creation. It will explore the contributions designers offer through components of the design process and illustrate these contributions with case studies.

Introduction

The diversification of the designer's activities is a result of today's unique circumstances: the market is saturated with options; product development processes need to be completed faster than ever; manufacturing capabilities

Abstract

From minimalist installation to monumental set design, runway scenography is now central to the grammar of fashion communications. Often used to symbolize the power of the brand or to reaffirm its DNA, the strategic choices of setting, space, and set design are an integral part of the promotion of designer fashion. Today's runway show does not simply present a collection of clothes against a background set design; it uses scenography more instrumentally as the setting for brands and digital influencers to capture images of fashion for followers of online social media. Architectural paradigms now feed into the symbolic discourse of branded fashion and influence the way in which collections are *spectacularized* for different audiences. This article analyses the strategic use of runway scenography as a key part of contemporary branded communications, exploring specifically how the creative synergies between fashion and architecture are being reshaped by the impact of digital social media, in particular by Instagram.

Art Video Games: Ritual Communication of Feelings in the Digital Era

Carlos Mauricio Castaño Díaz, Worawach Tungtjitcharoen

First Published November 6, 2014 | Research Article | <https://doi.org/10.1177/1555412014557543>

Article information

Abstract

This study conducted analytical and semiexperimental research with the purpose of testing if art video games serve as a form of transmission of social representations and feelings. Accordingly, a free-association questionnaire was used after participants played the game The Graveyard. The associative method was paired with item hierarchization and clustering techniques using a structural approach. The data were analyzed using mixed methods (frequency analysis, semantic weight, and categorical clustering). Additionally, a cluster analysis was conducted to determine connections between representations. Afterward, categories were compared with the representations the game designers wanted to transmit to the players. The results of the research confirmed the possibility of accessing people's social representations using a video game as stimulus. Cluster analyses depicted that these representations were emotionally linked and socially shared among the players without regard to age or gender. The relation with the designers' representations about the game was found to be not significant.

On the ‘nature’ of the ‘artificial’

[Massimo Negrotti](#)

[AI & SOCIETY](#) (2021) | [Cite this article](#)

8 Accesses | [Metrics](#)

Abstract

Since the work by Herbert Simon, no particular attention has been paid to the distinction between conventional technology and technology directed at the reproduction of natural instances. Nevertheless, if we had a general knowledge of the methodological aspects that any attempt to reproduce natural objects or processes unavoidably requires, then we would understand why, as a rule, no artificial device can ‘converge’ to its natural counterpart and why, on the contrary, the more it advances, the further away it goes from it. As a result, our efforts should be oriented to deeply investigate the artificial as it were a truly new ‘nature’ in itself.

Introduction

Digitization, conceived as an information based translation of phenomena, is a two phase cultural process because it involves two cultural levels: that of design and that of its final spread within society. The latter aspect is analysed much than the former because of its direct effects on human behaviour and, to some degree, on our way of looking at reality. Nevertheless, design plays a key role since designers always try to guess, on one hand, which

1 Introduction

Digitization, conceived as an information based translation of phenomena, is a two phase cultural process because it involves two cultural levels: that of design and that of its final spread within society. The latter aspect is analysed much than the former because of its direct effects on human behaviour and, to some degree, on our way of looking at reality. Nevertheless, design plays a key role since designers always try to guess, on one hand, which projects are potentially achievable in exploiting current technology, and on the other, which projects final users will potentially reward. This paper will address the first issue for digitization regarding a long standing tradition that today is strongly encouraged by the advancements of digital electronics and computer science. I am referring to the very wide world of the *artificial* that is at the basis of any project in all the most advanced technologies, digitization included. In whatever field of contemporary advanced technology, be it Artificial Intelligence or domotics, bioengineering or robotics, we can ascertain that the main, tacit aim is the artificial reproduction of some human characteristic, aspect, ability or behavior. Therefore, it is clear that the outcome of any artificialization project will be successful if, and only if, it will match human

perceptions, or needs, regarding the natural thing or process that the artificialization intends to reproduce. On the other hand, no artificial object or process will completely overlap its natural counterpart and, as a consequence, if the final user will accept the artificial, then he/she will also implicitly accept the features that diverge from it, resorting to some adaptation strategy or even neglecting them. In either case, users are forced to change more or less relevant traits of their behavior or of their perception of reality.

Thus, the study of the reasons that make an artificial object or process always intrinsically different from the natural object or process it comes from, holds great importance for understanding why and how its large diffusion in our society is triggering new cultural models that still are far from being understood.

2 The notion of ‘naturoid’

The human desire to reproduce natural objects and processes ranges from pure dreams to actual design: from Icarus’s wings to current robotics and bioengineering. I propose the concept of *naturoid* for referring to man’s attempts to reproduce natural objects or processes. The development of naturoids may be viewed as a special class of technological activity, distinct from the ‘conventional’ technology which does not attempt to reproduce natural phenomena but creates things that do not appear in nature. The concept of naturoid

Live Archive Projects in a Design History Learning Setting

Judy Willcocks

This article outlines a methodology for using uncatalogued archive material in a design history learning setting. The study references concepts such as experiential learning¹ and object-based or object-centred learning,² and draws on student reports and interviews to explore the potency of the learning experience. Using a specific case study addressing archives relating to Basic Design pedagogy at the Central School of Arts and Crafts it summarises the practicalities of enabling students to work with uncatalogued archive material and explores the pedagogic frameworks required to engage with curatorial practices in this context. Based on the case, the article recommends a flexible approach to archive material that has not yet been subject to formal archiving processes, viewing this as a time when a rich range of narratives can be uncovered through collaborative practice. It also references the history of design history and argues for more attention to be paid to the impact of design pedagogies on the creative and production processes. While the contents of the article are relevant to archival practice beyond the UK it is worth noting that the perspectives and stories considered in the article are UK-centred.

Keywords: archives—art education—Basic Design—design education—design history—material culture studies

Introduction

For many archivists the thought of putting uncatalogued archive material to work in student-led projects or other activist settings may feel like a considerable challenge to accepted professional codes of practice. They might cite the risks of material becoming disordered or damaged, the potential provision of sub-standard catalogue records or the risks inherent in allowing untrained staff to handle archive material. Many archives simply place a complete embargo on accessing uncatalogued material (at least until it has been box listed) and in many cases the timescales for addressing documentation backlogs can stretch to several years.

Given the extraordinary amount of archive material being generated today a number of scholars such as Terry Cook³ and John Ridener⁴ have argued for a transformation of archival theory to better reflect the realities of the record in the twenty-first century. Other archival practitioners, such as Hannah Grout,⁵ have called for a more inclusive practice that seeks to ensure the cultural biases and the structural inequalities of society are not reflected in archival activities (for example, through the cataloguing of collections by a predominantly white body of professional staff). This article argues that archives which have educational or public engagement potential should not be locked away pending cataloguing. Rather, material that is yet to undergo formal processing might be put to work (albeit under close professional supervision) in a way which offers opportunities for more collaborative meaning-making⁶ and the inclusion of multiple perspectives in curatorial processes. This is not to suggest a challenge to accepted conventions for conservation or storage, or to international cataloguing standards such as the General International Standard Archival Description (ISAD(G)). Rather, it explores

Gustavo Grandal Montero (ALJ): *Could you give an overview of the main aims and context of the project?*

Ami Clarke (AC): The Digital Archive of Artists' Publishing (DAAP) is an interactive, user-driven, searchable database of artists' books and publications, that acts as a hub to engage with others, built by artists, publishers and a community of creative practitioners in contemporary artists' publishing, developed via an ethically-driven design process, and supported by Wikimedia UK and Arts Council England. The project is inspired by the site of Banner Repeater's public Archive of Artists' Publishing on Hackney Downs train station, with 11,000 people passing a day, in response to the need for a similarly dynamic approach to archiving in an online context.

Central to how Banner Repeater operates is our location, with a gallery, a bookshop and an archive deliberately sited within the ebb and flow of the commuting public, enmeshed within the public transport networks in a busy thoroughfare of passing traffic, in order to distribute excellent art and artists' publishing directly into a main artery of the city of London. Networked strategies underpin everything we do, pioneering a hybrid way of working in contemporary critical art practice through the strong symbiosis between precedents set via experiments in text and publishing held in the Archive, and artistic practices engaging in networked strategies today.

Publishing is particularly interesting in this regard, as it developed alongside technological advances throughout history. Textual productions over time, tend to reveal how they infect, as well as contain, traces of the 'subject' - that's me and you - emerging in synthesis with their environment: that includes the means of

ABSTRACT

THE AUTHOR ARGUES THAT THE WORK OF ART IN THE AGE OF DIGITAL reproduction is physically and formally chameleon. There is no longer a clear conceptual distinction between original and reproduction in virtually any medium. These two states, one pure and original, the other imitative and impure, are now fictions. Images, sounds, and words are received, deconstructed, rearranged, and restored wherever they are seen, heard, and stored. What has happened to the aura surrounding the original work of art, so prized by generations of collectors and critics? Digitalization transfers this aura to the individualized copy. Artists and viewer perform together. The dead replica and the living, authentic original are merging, like lovers entwined in mutual ecstasy.

*I am adding my finger to your universe.
You see feel it as you type mine, on your hand, can't you?*
—The Queen of Touch [1]

There is a pulse that is literally and rather "physically" repetitive (but the pulses are never purely physical) and there are more sophisticated pulses that are more "cultural" or "spiritual," more subtle. But every institution devoted to explore the law is a pulse.
—Jacques Derrida [2]

The work of art in the age of digital reproduction is physically and formally chameleon. There is no clear conceptual distinction now between original and reproduction in virtually any medium based in film, electronics, or telecommunications. As for the fine arts, the distinction is eroding, if not finally collapsed. The fictions of "master" and "copy" are now so entwined with each other that it is impossible to say where one begins and the other ends. In one sense, Walter Benjamin's proclamation of doom for the aura of originality, authored early in this century, is finally confirmed by these events [3]. In another sense, the aura, supple and elastic, has stretched far beyond the boundaries of Benjamin's prophecy into the rich realm of reproduction itself. Here in this realm, often mislabeled "virtual" (it is actually a male reader, or RR), both originality and traditional truth (symbolized by the unadorned photographic "fact") are being enhanced, not betrayed.

But the work of art is not only changing its form and means of delivery. By far its most provocative extension is into the intimate bowels of our body, mind, and spirit. Beside this, all changes, even the Internet, even our recent evolution into the World Wide Web, pale. No single element of the messaging now going on disturbs the guardians of traditional modernity more than this single fact. A few years ago, Frederick Jameson, the senior and singular Marxist art theorist of our day, finally accepted video as the real heat of contemporary art. But he complained, rightly, about its inability to foster communication of any kind.

Yet now we see communicative networks ribbing the globe. You and I, online, are strapped down—maybe like Prometheus by a web of incise personal signals. I have no doubt that Jameson and his colleagues will shortly proclaim that this new and highly intensive method of linking is improper material for high art. He won't be moved by "The Queen of Touch" (whose real name I don't know and don't need), who reached out to me one night when I was thinking about this piece. Art, in the traditional realm, is a commodity that must pretend to universality. It

Description

This book aims to provide the reader with a theoretical framework that considers how psychoanalysis can enrich the clinical application of the arts therapies. Five specialist arts therapies used in contemporary psychotherapy are examined: drama, psychodrama, art, dance movement and music. Although the contributors represent a variety of orientations and practices, it is the theme of integration which makes this book most relevant.

Description

Using Expressive Arts to Work with Mind, Body and Emotions combines theory, research and activities to produce practical suggestions for enhancing client participation in the therapy process. It surveys the literature on art therapy; somatic approaches; emotion-activating models; use of music, writing and dreamwork; and the implications of the new findings in neuroscience. The book includes step-by-step instructions for implementing expressive arts in therapy.

Description

Does Laura Mulvey's theory, that only women can be the object of the erotic gaze in cinema, still hold true if films that lie beyond mainstream Hollywood are examined? Through close analysis of the 1937 French film *Pépé-le-Moko*, this paper examines those aspects of the filmmakers' craft which influence the direction of the gaze - such as costume, cinematography/lighting, use of the body, and star persona. It demonstrates the way

Description

Raphael (1483-1520), the Italian painter and architect of the High Renaissance, was a genius in and ahead of his time. Together with Michelangelo and Leonardo da Vinci, he formed the classical trinity of this era and elaborated a rich style of harmony and geometry. As one of the great masters of the Renaissance and artist to European royalty and the Papal court in Rome, his works comprise various themes of theology and philosophy.

Transformation-Aware Embedding for Image Provenance

Aparna Bharati¹, Member, IEEE, Daniel Moreira², Member, IEEE, Patrick J. Anderson de Rezende Rocha³, Senior Member, IEEE, Kevin W. Bowyer⁴, and Walter J. Scheirer⁵, Senior Member, IEEE

Abstract—A dramatic rise in the flow of manipulated image content on the Internet has led to a prompt response from the media forensics research community. New mitigation efforts leverage cutting-edge data-driven strategies and increasingly incorporate usage of techniques from computer vision and machine learning to detect and profile the space of image manipulations. This paper presents a novel framework, called *DeepFakes*, which aims at discovering relationships among different manipulated image versions that share content. One important task in provenance analysis, like most visual understanding problems, is establishing a visual description and dissimilarity computation method that connects images that share full or partial content. This is a challenging task because the learned descriptions are generally appropriate for tasks such as object recognition — may not sufficiently encode the subtle differences between near-duplicate image variants, which significantly characterize the provenance of any image. This paper introduces a novel data-driven learning-based approach that provides the context for ordering images that have been generated from a single image. The proposed framework leverages a deep convolutional neural network to learn transformation-aware embeddings using weak supervision via composited transformations and a rank-based Edit Sequence Loss. To establish the effectiveness of the proposed approach, comparisons are made with state-of-the-art handcrafted and deep-learning-based descriptors, as well as image matching approaches that incorporate provenance information. The proposed approach in the context of image provenance analysis and improves upon existing approaches.

Index Terms—Image provenance analysis, image manipulation, deep learning, forensics, edit sequence loss.

Enclothed Knowledge: The Fashion Show as a Method of Dissemination in Arts-Informed Research

Ben Barry

Key words: arts-based research; arts-informed research; clothing; embodiment; fashion show; gender; masculinity; participatory; performance

Abstract: In this article, I investigate the processes, benefits and dilemmas of producing a fashion show as a method of dissemination in arts-informed qualitative research. I examine a project that used a fashion show to analyze and represent interview findings about men's understandings and performances of masculinities. Fashion shows facilitate the dissemination of new qualitative data—what I coin “enchanted knowledge”—which is embodied and inaccessible through static or verbal descriptions. Fashion shows also enable participants to shape knowledge circulation and allow researchers to engage diverse audiences. Despite these benefits, researchers have to be mindful of ethical dilemmas that occur from the absence of anonymity inherent in public performances and therefore I suggest strategies to mitigate these threats to research ethics. Ultimately, I argue that fashion shows advance social justice because the platform can transform narrow, stereotypical understandings of marginalized identities.

1. Introduction

In this article, I investigate the fashion show as a method of dissemination in arts-informed qualitative research. I explore a research project—[Refashioning Masculinity](#)—that used a fashion show to analyze and represent interview findings about men's understandings and performances of masculinities. Some scholars might be hesitant to use a fashion show in research given that fashion is frequently associated with superficiality (ENTWISTLE, 2000) and commerce (HOFFMANN, 2009). Fashion shows and the clothing featured in them, however, construct, express and embody lived experiences (WOODWARD, 2016a). To explore fashion shows as research dissemination, I first examine arts-informed research methodology and the potential of using fashion shows within its

not of an oscillation between text and history, much less of an adjudication between them, much less of some synthesis of them in some grand Hegelian *Aufhebung*; it consists instead in the exploration of the fundamental incommensurability, yet mutual dependence, of existing disciplinary categories of knowledge.

James D. Herbert is associate professor of art history at the University of California, Irvine. His *Fauve Painting: The Making of Cultural Politics* (1992) received the Hans Rosenhaupt Memorial Book Award. He is currently working on a manuscript entitled *Global Speculations: Exhibitions of Commerce, Ethnography, and Art in Paris, 1937–38* [Department of Art History, University of California, Irvine, Calif. 92717; jdherb@uci.edu].

Interdisciplinarity and Visual Culture

W. J. T. Mitchell

When I was asked by the *Art Bulletin* to write something about “interdisciplinarity,” it seemed like an easy task. After all, I’ve been editing an interdisciplinary journal of criticism and theory in the humanities and social sciences for seventeen years. I have also been working (along with many others) at the disciplinary fringes of art history, engaged in an interdisciplinary practice called “iconology” (the general study of images across the media) or more broadly “visual culture” (the study of the social construction of visual experience). These practices have surfaced in the convergence of disciplines of art history, literary and media studies, and cultural studies around what I have called a “pictorial turn.”¹ This turn runs throughout critical theory, philosophy, and political discourses of identity formation, sexuality, otherness, fantasy, the unconscious; it focuses on the cultural construction of visual experience in everyday life as well as in media, representations, and visual arts. It is a project that requires conversations among art historians, film scholars, optical technologists and theorists, phenomenologists, psychoanalysts, and anthropologists. Visual culture is, in short, an “interdiscipline,” a site of convergence and conversation across disciplinary lines.²

The more I’ve thought about this topic, however, the more convinced I am that calling these practices “interdisciplinary” does not in itself tell us what is crucial about them. The name may be nothing more than a euphemism for something else, a term that permits us to feel good about what we do and to avoid thinking about it too precisely. There is no question that “being interdisciplinary” is a “good thing” in contemporary academic parlance. My impression is that the term emerged in 1970s foundation jargon (especially at the NEH) as a code word for politically or theoretically adventurous work (feminism and women’s studies, work in media and mass culture, deconstruction, semiotics, Marxist and psychoanalytic criticism).³ The term had a useful function, then, in making this new work look professionally respectable and safe. It provided a neutral or even honorific rubric, a form of camouflage that rendered it indistinguishable from work that was *not* especially adventurous in its political or theoretical engagements. In these safer forms of interdisciplinarity, one could conduct “comparative” studies of the arts within familiar historicist frameworks,⁴ or apply tested sociological or literary or psychoanalytic or semiotic methods to art-historical problems and be sure of getting results. New readings of works of art would be produced; a way of decoding, translating, deciphering, and describing the visual would be provided. Certainly, if it is good to have a discipline or to be disciplined, it must be even better to have mastered more than one discipline, to “be interdisciplinary.”

Interdisciplinarity, in short, is a way of seeming to be just a little bit adventurous and even transgressive, but not too much. It has been around long enough now to seem like a regular professional option, if not itself a discipline, in the structure of academic knowledge. Every up-to-date university in the United States prides itself on its commitment to interdisciplinary research and training. Institutes, councils,

Information flows, without which it is impossible to imagine a modern society and its cultural environment, penetrate into all spheres of an individual’s life thanks to digital technologies. As a result, social processes experience drastic changes in the ways and forms of cognition and transformation of the surrounding reality, as well as in the processes of formation and representation of the individual in society. As a result of the development of digital information technologies, significant changes have occurred in the living space and the perception of time by a person of the 21st century. The Internet has formed its own unique information space, with its own special social and technological characteristics. A virtual network is a space for global communication and high-speed data dissemination, as well as an environment for people’s interaction that is not limited by the barriers of traditional mass media. All this has created a new type of culture – the culture of virtual reality, since our reality consists mainly of everyday virtual experiences.

Keywords: visibility, visual communication, communication process

INTRODUCTION

Communication is the basic mechanism for integrating a person with social, natural and cultural spheres (Luhmann 2015). Currently, under the influence of information and communication processes, society is experiencing crisis moments that are particularly noticeable in the financial, social, political and cultural areas of life, which implies a radical re-evaluation and reinterpretation of the phenomena of modern culture (Mitchell 1995). The sphere of sociocultural, of which visual culture is a part, presupposes sociocultural communication (Spanbroek 2010). It goes far beyond aesthetic and artistic interaction and implies active interaction in the socio-cultural space of public life (Strickfaden 2010). In the context of the predominance of visual culture in modern society, researchers are increasingly paying attention to the study of visual communication (Hey 2003).

Visual interest in pictorial art during an aesthetic experience

PAUL LOCHER ^{1,*}, ELIZABETH A. KRUPINSKI ²,
CLAUDIA MELLO-THOMS ³ and CALVIN F. NODINE ⁴

¹ Department of Psychology, Montclair State University, Montclair, NJ 07043, USA
² Department of Psychology, Telemedicine and Radiology, University of Arizona, Tucson, AZ 85721, USA
³ Department of Radiology and Training Program of Biomedical Informatics, University of Pittsburgh, Pittsburgh, PA 15213, USA

Received 31 May 2006; accepted 26 December 2006

Abstract—Two experiments were performed during which adults untrained in the visual arts were shown digital versions of eight paintings by renowned artists. In Experiment 1 participants' written reactions following a single 100 ms glance at each work were found to overwhelmingly reflect an initial holistic impression (i.e. gist) of the structural arrangement and semantic meaning of the paintings. In the second experiment participants' eye movements and verbal reactions were recorded as they evaluated each reproduction for pleasingness. Analyses reveal the relationships between the content and structural organization of the art stimuli and the way viewers select, process and think about information contained in paintings across the time course of an aesthetic experience. The results are interpreted in terms of an information-processing stage model of visual aesthetics according to which perceptual-cognitive processing of an art stimulus begins with the rapid generation of a gist reaction followed by scrutiny of pictorial features directed in a top-down fashion by cognitively-based evaluative processes.

Keywords: Pictorial art; gist reaction; visual exploration; verbal reactions; aesthetic evaluation.

INTRODUCTION

Visitors looking at paintings in museum galleries glance at a composition and either almost immediately move on to another work or stop and spend time with it (Smith and Smith, 2001, 2003). Museum visitor behavior is in accord with our two-stage model that describes the relationship between eye movements and visual aesthetics (Locher, 1996; Locher and Nodine, 1987; Locher *et al.*, 1996; Nodine

Abstract

This book presents discussions by experts on all significant aspects of Byzantine Studies. Byzantine Studies deals with the history and culture of the Byzantine Empire, the eastern half of the Late Roman Empire, from the fourth to the fourteenth century. Its centre was the city formerly known as Byzantium, refounded as Constantinople in 324 CE, the present-day Istanbul. Under its emperors, patriarchs, and all-pervasive bureaucracy, Byzantium developed a distinctive society: Greek in language, Roman in legal system, and Christian in religion. Byzantium's impact in the European Middle Ages is ... [More](#)

[+] Abstract and Keywords

The Romans were not the first road builders in history, but they were the first to attempt to cover the whole empire up its frontiers with a systematic and dense network of carefully engineered and well-maintained roads. As the Byzantine Empire is the Roman Empire of the east, Byzantine roads are in effect the Roman roads of the eastern provinces, which the Byzantines in the course of their history little by little adapted to changing circumstances, needs, and means. This article focuses on the central regions of the Byzantine Empire, the Balkan peninsula, and Asia Minor. The article discusses the main routes of the Byzantine Empire; the purposes of road-building, their users, the means of travel; road administration, Byzantine road-building and repairing activities; different levels of roads and their Byzantine designations; the archaeological aspect of roads, bridges, and staging posts.

Keywords: [Byzantine Empire](#), [Roman Empire](#), [Balkan peninsula](#), [Asia Minor](#), [road-building](#), [travel](#), [roads](#), [bridges](#), [staging posts](#), [road administration](#)

THE Romans were not the first road builders in history, but they were the first to attempt to cover the whole empire up its frontiers with a systematic and dense network of carefully engineered and well-maintained roads (Schneider 1982: 1–2). As the Byzantine empire is the Roman empire of the east, Byzantine roads are in effect the Roman roads of the eastern provinces, which the Byzantines in the course of their history little by little adapted to changing circumstances, needs, and means. We will restrict ourselves here to the central regions of the Byzantine Empire, the Balkan peninsula and Asia Minor. The following points will be treated:

- I. The main routes of the Byzantine empire; II. the purposes of road-building, their users, the means of travel; III. road administration, Byzantine road-building and repairing activities; IV. different levels of roads and their Byzantine designations; V. the archaeological aspect of roads, bridges, staging posts.

abstract art

Art that does not depict recognizable scenes or objects, but instead is made up of forms and colours that exist for their own expressive sake. Much decorative art can thus be described as abstract, but in normal usage the term refers to modern painting and sculpture that abandon the traditional European conception of art as the imitation of nature and make little or no reference to the external visual world. Abstract art in this sense was born and achieved its distinctive identity in the second decade of the 20th century and has played a major part in modern art, developing into many different idioms—from cool geometric precision to explosive spontaneity. Some exponents of such art dislike the term 'abstract' (Arp, for example, hated it, insisting on the word 'Concrete'), but the alternatives they prefer, although perhaps more precise, are usually cumbersome, notably non-figurative, non-representational, and Non-Objective.

The basic aesthetic premise of abstract art—that formal qualities can be thought of as existing independent of subject matter—existed long before the 20th century. Ultimately the idea can be traced back to Plato, whose dialogue *Philebus* (c.350 BC) puts the following words into Socrates' mouth: 'I do not mean by beauty beauty as that of animals and pictures...but understand me to mean straight lines and circles, and the figures which are formed out of them by turning-lathes and rulers and measures of angles; for these I think are only relatively beautiful, like other things, but eternally and absolutely beautiful.' More pertinently, in his *Discourse* (1780) to the students of the [Royal Academy](#), Sir Joshua [Reynolds](#) advised that 'we are so much more experienced that the beauty of form alone, without the assistance of any other quality, makes of itself a just claim on our esteem and admiration'; and in discussing the *Belvedere Torso* he referred to 'the perfect science of abstract form'.

In the 19th century several notable critics developed Reynolds's line of thought, including Maurice De Waele, who in 1890, in a remark that was to be much quoted, said, 'Remember that a picture—before being a work of art—is essentially a flat surface covered with colours assembled in a certain order'. The year [Whistler](#) wrote, 'As music is the poetry of sound, so is painting the poetry of sight, and the subject of painting is nothing to do with the harmony of sound or of colour', and to emphasize his belief that painting, like music, was concerned with abstract aesthetic qualities, he frequently used words such as 'harmony' or 'symphony' to describe his pictures.

Pop art

A movement based on the imagery of consumerism and popular culture, flourishing from the late 1950s to the early 1970s, chiefly in the USA and Britain. The term was coined c.1955, perhaps by Lawrence [Alloway](#). Comic books, advertisements, packaging, and images from television and the cinema were all part of the iconography of the movement. In the USA Pop art was initially regarded as a reaction from [Abstract Expressionism](#) because its exponents brought back figural imagery and made use of [Hard-Edge](#) techniques. It was seen as a descendant of [Dada](#) (in fact Pop art is sometimes called [Neo-Dada](#)) because it debunked the seriousness of the art world and embraced the use or reproduction of commonplace subjects (comic strips, soup tins, highway signs) in a manner that had affinities with [Duchamp's](#) ready-mades.

The most immediate inspiration, however, was the work of Jasper [Johns](#) and Robert [Rauschenberg](#), both of whom began to make an impact on the New York art scene in the mid-1950s. They opened a wide new range of subject matter with Johns's paintings of flags, targets, and numbers and his sculptures of objects such as beer cans and Rauschenberg's collages and combine paintings featuring Coca-Cola bottles, stuffed birds, and photographs from magazines and newspapers. While often using similar subject matter, Pop artists generally favoured commercial techniques in preference to the painterly manner of Johns and Rauschenberg. Examples are Andy [Warhol's](#) screenprints of soup tins and so on, Roy [Lichtenstein's](#) paintings in the manner of comic strips, and Mel [Ramos's](#) brash pin-ups. Claes [Oldenburg](#), whose subjects include ice-cream cones and hamburgers, has been the major Pop art sculptor.

John Wilmerding (*American Art*, 1976) writes that Pop art 'cannot be separated from the culmination of affluence and prosperity during the post-World-War-II era. America had become a ravenously consuming society, packaging art as well as other products, indulging in commercial manipulation, and celebrating exhibitionism, self-promotion, and instant success...Pop's mass-media orientation may further be related to the acceleration of uniformity in most aspects of national life, whether restaurants or regional dialects. Shared by all Americans were the principal preoccupations of Pop art—sex, the automobile, and food.'

FEATURED Daoji

Chinese painter and calligrapher [Daoji](#) [Shitao] possessed unique skill in depicting topography, drawing the veins of rocks in contour lines and layering brushstrokes into steep terrain. In his writings, Daoji advocated that the painter should assert selfhood and avoid thoughtless imitation.

FEATURED Norman Rockwell

Known for his iconic magazine covers, [Norman Rockwell](#), had a meticulous, iterative method of working, developing paintings through a series of sketches, models, photographs, and drawings.

bibliography contributed by Di Luo

Chinese calligrapher, seal-carver, painter, and scholar. After his example, it became common for artists to attempt to be competent in painting, calligraphy, and seal-carving rather than to specialize in a single discipline. Zhao was one of the greatest artists of the late Qing period (1644–1911), although much of his work displays a disquiet and unbalanced awkwardness that conflicted with Chinese aesthetic values of the time.

ДОСТУП К СПЕЦИАЛИЗИРОВАННЫМ БАЗАМ ДАННЫХ

Рекомендательный список журналов*. Arts

Psychology of Aesthetics Creativity and the Arts

Охват: 2006— настоящее время

Периодичность: ежеквартально

Издатель: EDUCATIONAL PUBLISHING FOUNDATION-AMERICAN PSYCHOLOGICAL ASS

Импакт-фактор: 2.482 (JCR 2019)

Описание: журнал Psychology of Aesthetics Creativity and the Arts посвящен продвижению научных исследований в области психологии эстетики, психологии производства и оценки видов искусства и всех аспектов творческой деятельности.

International Journal of Arts Management

Охват: 1998— настоящее время

Периодичность: 3 номера в год

Издатель: Montréal: Management International

Импакт-фактор: 0.784 (JCR 2019)

Описание: основными предметными областями статей, публикуемых в журнале International Journal of Arts Management, являются изобразительное искусство и театр, бизнес и международный менеджмент в искусстве.

* Список подготовила главный библиотекарь Юферова Ольга

Do With Me: The Action Orient of Aesthetic Experiential Play

Brooke Anne Hofess
Appalachian State University

How might the action orient of aesthetic experiential play point art educators and arts-based researchers toward innovative approaches, practices, and commitments? This question is explored in and through unfolding letters and interview conversations from the author's dissertation research. In doing so, two swells of implications are followed: the significance of a Deleuzian pedagogy that invites art teacher educators/researchers to practice an ethic of do with me rather than do as I do (Deleuze, 1968/1994), and how actions inspired by such an ethic become generative in a multiplicity of doing. As such, this paper presents an entanglement of pedagogical implications for art education and methodological significance for arts-based educational research.

Arts based research is closer to the idea of "let us reason together" than it is about the swift pursuit of a certain outcome. — Barone and Eisner (2012, p. 158)

Listen

Above our hands holding lukewarm coffee mugs, and the tenuous, unwieldy stacks upon my desk, her voice found me listening:

It was one of the most meaningful gifts I have ever been given. Because it was a gift that if you take it for what it can be, continues to give. Not only between you and (me), or, in theory or in practice, but in experience. It was a gift that offered us so much more than we realized in that moment.

It is endless. It continues on in all aspects of our lives. That is the beauty of it. (Virginia, co-conspirator in A-E-P)
